

ISO SPREAD

Compatible with all your ISOBUS spreaders

Thanks to the terminal on your tractor, you can view vital information such as the belt's speed of travel, the gate's opening height and the surface, distance and time counters.

Features:

Regulation of the belt speed depending on the speed of travel

Control of additional features (unblocking, gate opening, auxiliary functions)

Calculation of flow rate and quantities spread

Area (speed sensor)/distance/time counter

Automatic correction of the quantity according to the actual output of the spreader

Quantity modulation using guidance mapping

Automatic spreading shut-off in areas that have already been spread

Compatible with terminal information management systems
